InvestorHub

InvestorHub

A web platform that connects verified investors with verified business owners in Bangladesh

Presented by [Your Name] · ID [Your Student ID]

Supervisor [Supervisor Name]

Programme B.Sc. in Computer Science and Engineering, IUBAT

Built with React · Node.js · Express · MongoDB · Socket.IO · SSLCommerz · Gemini AI

Why I built this platform

What business owners face

- They have a good business plan but no way to reach an investor.
- Banks ask for collateral that a small business cannot give.
- They post in Facebook groups and get replies they cannot trust.

What investors face

- They have money to invest but no list of real opportunities.
- Proposals arrive with no identity proof and no documents.
- Nothing records what was promised, so there is no safety.

SAY THIS

In Bangladesh, small businesses and investors both exist, but they cannot find each other safely. Today they meet through Facebook groups or personal contacts, where nobody is verified and nothing is recorded. My project solves this problem.

What InvestorHub does

Four things the platform guarantees

- Verified people: every member uploads a NID and an admin approves the account.
- Approved listings: every post is checked by an admin before the public can see it.
- Controlled contact: chat opens only between an investor and a business owner.
- Recorded money: every payment goes through SSLCommerz and is verified by the server.

One sentence

- InvestorHub is a moderated marketplace where an investor and a business owner can find each other, talk to each other, and complete the investment in one place.

SAY THIS

InvestorHub is a moderated marketplace. Verification, approval, controlled communication and recorded payment — these four ideas are the heart of my project.

Who uses the platform

Guest

- Any visitor.
- Can browse and search listings.
- Can register or contact us.
- No login needed.

Investor

- Has money to invest.
- Publishes an investment offer.
- Sends match requests.
- Pays through the gateway.

Businessman

- Needs funding.
- Publishes a funding request.
- Accepts or rejects requests.
- Receives the net amount.

Administrator

- Approves accounts and listings.
- Handles reports.
- Monitors payments.
- Reads the analytics.

SAY THIS

The platform has three human roles plus the public visitor. An investor gives money, a businessman needs money, and the administrator keeps the platform safe.

What the system is built with

Frontend

- React 19 with Vite
- Tailwind CSS for the design
- Redux Toolkit for state
- React Router for the pages

Backend

- Node.js with Express
- JWT for authentication
- bcrypt for password hashing
- express-validator for input checks

Database and real time

- MongoDB with Mongoose
- Twelve collections
- Socket.IO for live chat
- Indexes for fast search

External services

- SSLCommerz payment gateway
- Google Gemini for the assistant
- Image hosting for uploads
- MongoDB Atlas for the live database

SAY THIS

It is a MERN stack project: MongoDB, Express, React and Node. Socket dot IO gives the live chat, SSLCommerz handles the money, and Gemini powers the help assistant.

How a user goes from visitor to investment — 8 steps

1

Visit and browse

Anyone can see approved listings without an account

2

Register

Choose investor or businessman, create the account

3

Pay entry fee

One-time BDT 100 through SSLCommerz

4

Verify identity

Upload the NID photo for the admin to check

5

Admin approves

The account becomes active and the dashboard opens

6

Publish and match

Post a listing, send or accept a match request

7

Chat

Real-time conversation between the two matched parties

8

Invest and settle

Payment through the gateway, commission deducted, invoice issued

SAY THIS

This is the complete journey of my platform in eight steps. I will now show you every screen in this order, starting from the public pages.

PART 1

Public pages

Anyone can open these pages without an account

Home page

/

- Explains in one line what the platform does.
- A search box that searches the live listings.
- Platform totals: active investors, businesses and matches.
- A help assistant button at the bottom right corner.

SAY THIS

This is the landing page. A visitor immediately understands what the platform is for, and can search real listings from here without creating an account.

Browse listings

/finding-goal

- Shows every listing that the admin has approved.
- Search by keyword: every word must match the title, description or category.
- Filter by type, category and budget range.
- Sort by newest, oldest, budget or popularity.

SAY THIS

This page lists all approved opportunities. The visitor can search by keyword and filter by sector or budget, so they reach the relevant listing quickly.

Listing details

/post/:id

- Full description, budget, category and posting date.
- Who posted it, with their role and location.
- A view counter that increases on every visit.
- Action buttons appear only for a signed-in member.

SAY THIS

When a visitor clicks a listing, they see the full proposal and who posted it. To send a match request or to invest, they must sign in first.

Registration

/register

- Name, email and password.
- The applicant chooses the role: investor or businessman.
- The password is hashed with bcrypt, never stored as text.
- The new account starts in the pending state.

The screenshot shows the InvestorHub registration interface. At the top, there's a navigation bar with the 'IH InvestorHub' logo, links for 'Home', 'Finding Goal', and 'Contact', a search icon, a 'Log in' link, and a green 'Get started ->' button. The main content area features a central registration form. At the top of the form are two tabs: 'Log in' and 'Register'. Below the tabs is the heading 'Create an account' with the subtext 'Join as an investor or businessman.' The form asks 'I am a' and provides two buttons: 'Investor' (highlighted in green) and 'Businessman'. Below this are input fields for 'Full name' (placeholder: 'Your name'), 'Email' (placeholder: 'you@example.com'), 'Password' (placeholder: 'At least 6 characters' with a toggle icon), and 'Confirm password' (placeholder: 'Repeat password'). A large green 'Create account' button is at the bottom of the form.

SAY THIS

Registration is where the user chooses their role. Notice that the account is not active yet — it starts as pending, because verification comes next.

Login

/login

- Email and password only.
- The server returns a signed JWT token.
- A blocked or suspended account cannot sign in.
- The token is sent with every later request.

SAY THIS

Login gives the user a signed token. Every protected request carries this token, and the server checks the role and the account status before it answers.

Contact page

/contact

- Open to everyone, no login needed.
- Name, email, subject and message.
- The message goes straight to the admin inbox.
- The admin can mark it read or delete it.

SAY THIS

Anyone can send a message from the contact page. It arrives in the admin inbox, which I will show later in the admin section.

The screenshot displays the 'Contact us' page of InvestorHub. The top navigation bar includes the 'IH InvestorHub' logo, a search icon, a 'Log in' link, and a 'Get started' button. The main content area is titled 'GET IN TOUCH' and 'Contact us', with a subtext: 'Have a question about InvestorHub? Send a message and we will get back to you.' Below this, contact details are listed: Email (support@investorhub.com), Office (Dhaka, Bangladesh), and Response time (Usually within 24 hours). The contact form on the right contains fields for Name (placeholder: 'Your name'), Email (placeholder: 'you@example.com'), Subject (placeholder: 'How can we help?'), and Message (placeholder: 'Your message...'). A 'Send message' button is positioned at the bottom of the form. The footer section is divided into four columns: 'IH InvestorHub' with the tagline 'Connecting investors and entrepreneurs for mutual growth and success.', 'Product' with links to Home, Finding Goal, and Contact; 'Account' with links to Log in, Get started, and Dashboard; and 'Social' with links to LinkedIn, Twitter, and Facebook.

Platform reviews

/review

- Only a signed-in member can open this page.
- The Review link is hidden from a logged-out visitor.
- Star rating, average score and a per-star breakdown.
- Each account keeps exactly one review and can edit it.

SAY THIS

Members can rate the platform here. One account can write only one review, and posting again edits the old one instead of creating a duplicate.

AI help assistant

- A floating button on the home page.
- Answers questions about InvestorHub only.
- Powered by Google Gemini through my own server.
- The API key stays on the server, never in the browser.

SAY THIS

This is the AI assistant. It answers questions about the platform, for example how to get an account approved. The key is kept on my server, so nobody can steal it from the browser.

PART 2

Becoming a verified member

After registration the user must complete three steps before the dashboard opens

Pay the one-time entry fee

/entry-fee

- Every new member pays BDT 100, one time only.
- Paid with card, bKash, Nagad or bank through SSLCommerz.
- It keeps the platform limited to serious members.
- The account cannot continue until the fee is settled.

SAY THIS

The first gate is the entry fee. It is a small one-time payment that keeps out people who are not serious, and it funds the platform.

Identity verification with NID

/onboarding

- The member uploads a clear photo of the NID or date of birth card.
- The image is stored and shown only to the admin.
- The page refuses to submit without a file.
- The account then moves to the admin review queue.

SAY THIS

The second gate is identity. Every member must upload a national ID, which only the admin can see. This is what makes the platform trustworthy.

The screenshot shows the 'STEP 3 OF 3 - IDENTITY VERIFICATION' page on the InvestorHub website. The page is for a user named Hasan. It features a central white card with a green shield icon at the top. The text on the card reads: 'STEP 3 OF 3 · IDENTITY VERIFICATION', 'Upload your NID or DOB, Hasan', 'To keep InvestorHub safe, every business account is verified. Upload a clear photo of your NID card or DOB — an admin reviews it before activating your account.', a dashed box with an upload icon and the text 'Click to choose your NID/DOB photo' and 'JPG or PNG, max 5MB', a green 'Submit NID/DOB for verification' button, and a link 'Log out — continue later'. The top navigation bar includes the InvestorHub logo, links for Home, Finding Goal, Contact, and Review, a search icon, and a user profile for Hasan. The bottom footer contains the InvestorHub logo and tagline, and four columns of links: Product (Home, Finding Goal), Account (Log in, Get started), and Social (LinkedIn, Twitter).

Pending approval page

/pending

- Shown while the admin has not yet activated the account.
- Displays the email, the role and the current status.
- A check status button refreshes the state.
- The dashboard stays locked until the status becomes active.

SAY THIS

Until the admin approves, the user can only see this page. The dashboard is locked on the server as well, not just hidden in the interface.

PART 3

Investor dashboard

What an approved investor can do

Dashboard overview

/dashboard

- Counters for listings, matches and conversations.
- Quick actions for the most common tasks.
- Recent matches with their current state.
- The left sidebar holds all eight member pages.

SAY THIS

This is the investor dashboard. It summarises everything in one view: how many listings, how many matches and how many conversations the user has.

Create a listing

/dashboard/create-post

- Title, description, category and budget.
- An optional cover image.
- An investor listing means: I want to invest.
- The listing is saved as pending until the admin approves it.

SAY THIS

An investor can publish what kind of business they want to invest in. Note the listing does not go live immediately — the admin must approve it first.

The screenshot displays the InvestorHub dashboard for a user named Rafiq Hasan (Investor). The left sidebar contains a menu with options: Overview, My Posts, Create Post (highlighted), Matches, Investments, My Reports, Messages, and Profile. The main content area is titled 'CONTENT Create post' with the subtitle 'Publish a listing for investors or businesses to find.' The form includes a 'Cover image' section with a placeholder for uploading an image (JPG, PNG, GIF up to 5MB). Below this is a 'Title' field with the placeholder text 'What are you looking for?'. The 'Description' field has the placeholder text 'Describe your requirements in detail...'. The 'Category' section features a dropdown menu labeled 'Select category'. The 'Budget' section shows a currency selector set to 'BDT' and a value of '0'. At the bottom right of the form are 'Cancel' and 'Publish post' buttons. The user's profile information at the bottom left of the dashboard shows 'Rafiq Hasan' with the role 'Investor' and a 'Sign out' link.

My listings

/dashboard/posts

- All listings created by this account.
- A status badge: pending, active, rejected or completed.
- If the admin rejects, the reason is shown here.
- The owner can edit or delete a listing.

SAY THIS

Here the member tracks their own listings and sees the approval state. If a listing was rejected, the admin's reason is shown so the user can fix it.

Matches

/dashboard/matches

- Match requests sent and received, with filters by state.
- A request can only go to a member of the opposite role.
- The listing title links to the full listing.
- Once accepted, a Message button opens the chat.

SAY THIS

This is the matching page. An investor sends a request to a business owner. When the other side accepts, the message button appears and they can start talking.

Real-time messages

/dashboard/chat

- Live chat built with Socket.IO, no page refresh needed.
- Typing indicator and seen status.
- Messages are stored, so the history survives a logout.
- Chat is allowed only between an investor and a business account.

SAY THIS

This is the live chat. Messages appear instantly on both sides because the platform uses web sockets, and the whole conversation is saved in the database.

Investments and invoice

/dashboard/investments

- Every payment made through the gateway.
- Shows the gross amount, the 10% platform commission and the net amount.
- Transaction id, method and settlement date.
- A PDF invoice can be downloaded for each completed payment.

S Sabila Noor	Seed Funding for Organic Cosmet...	9/12/2026	VISA	IHDEM00001	Completed	BDT 300,000	View

SAY THIS

After the investment is completed, it is recorded here with the commission and the net amount, and both parties can download a PDF invoice as proof.

My reports

/dashboard/my-reports

- A member can report a listing or another user.
- The reason is required and stored.
- The reporter follows the status: pending, reviewed, resolved or dismissed.
- The admin's final note is shown to the reporter.

SAY THIS

If a member sees something wrong, they can report it, and this page lets them follow what the admin decided about the report.

Profile

/dashboard/profile

- Common fields: name, phone, location and photo.
- Investor fields: investment range, preferred industries and investment type.
- The verification badge and the account status.
- Role-specific data is kept in its own collection.

SAY THIS

The profile page has two parts: the common account information, and the fields that belong only to the investor role, such as the investment range and preferred sectors.

The screenshot shows the 'InvestorHub' web application. The top navigation bar includes the 'IH InvestorHub' logo, a search bar, and a user profile icon. A left sidebar menu lists options: Overview, My Posts, Create Post, Matches, Investments, My Reports, Messages, and Profile (which is highlighted). The main content area is titled 'ACCOUNT Profile' with a subtitle 'Keep your details current so matches stay relevant.' Below this is a user profile card for 'Rafiq Hasan' (rafiq@demo.com, Investor). The card contains two sections: 'Basic information' with fields for Name (Rafiq Hasan), Email (rafiq@demo.com), Phone (01711000000), and Location (Dhaka); and 'Investment preferences' with fields for Min investment (BDT 0), Max investment (BDT 0), Investment type (Equity), Preferred industry (Select industry), Experience (e.g. 10 years in tech investing), and Bio.

PART 4

Businessman dashboard

The same menu, but a different purpose for every page

Dashboard and listings

/dashboard/posts

- The same eight menu items as the investor.
- A business listing means: I need funding.
- The listing carries the amount of funding needed.
- It also waits for admin approval before going public.

SAY THIS

The businessman uses the same dashboard, but the meaning is reversed. Here the listing is a funding request instead of an investment offer.

Incoming requests and profile

/dashboard/matches

- Sees the match requests sent by investors.
- Can accept or decline each request.
- Accepting opens the chat with that investor.
- The profile holds company name, industry, business stage and funding needed.

SAY THIS

The business owner mostly receives requests. When they accept one, the conversation opens and the negotiation starts.

Investor and businessman — what is different

Area	Investor	Businessman
Purpose	Has capital, looks for a business	Needs capital, looks for an investor
Listing type	investor_post — an offer	business_post — a funding request
Profile fields	Investment range, preferred industries, investment type	Company name, industry, business stage, funding needed
Payment	Pays the investment through the gateway	Receives the net amount after commission
Match request	Can send to a business owner	Can send to an investor
Chat	Only with a business account	Only with an investor account

SAY THIS

Both roles share the same dashboard, but the system treats them differently. Only an investor can pay for an investment — the server blocks anyone else.

PART 5

Administrator dashboard

The person who keeps the platform safe and trustworthy

Admin overview

/dashboard

- A different sidebar with seven administrative pages.
- Shows what is waiting for action right now.
- Pending accounts and pending listings at the top.
- Admins are not blocked by the active-status rule.

SAY THIS

When an administrator signs in, the menu changes completely. The overview shows what needs attention, mainly accounts and listings waiting for approval.

Post approvals

/dashboard/listings

- Every new listing arrives here as pending.
- The admin can view, approve, reject or delete it.
- A rejection needs a written reason, shown to the author.
- A fully funded listing cannot be re-opened.

The screenshot shows the 'Post Approvals' dashboard in the InvestorHub Admin interface. The dashboard has a sidebar menu with options: Overview, Post Approvals (selected), Manage Users, Reports, Payments, Contact Inbox, and Analytics. The main content area displays the 'Post Approvals' section with a search bar and a notification: 'Investor and business posts stay hidden until you approve them.' Below this, there are five summary cards: Total (4), Pending (1), Active (3), Completed (0), and Rejected (0). A filter bar shows 'Pending' as the selected filter. The main list displays a single pending post titled 'Expansion Fund for Handicraft Export Business' by Sabila Noor. The post description is: 'A handicraft export business with confirmed orders from two European buyers needs funds for a second workshop.' The post details are: Sabila Noor · sabila@demo.com · 9/12/2026 · BDT 450,000. The post has three action buttons: View, Reject, and Approve, along with a delete icon.

ADMIN

Post approvals

Investor and business posts stay hidden until you approve them.

4 Total	1 Pending	3 Active	0 Completed	0 Rejected
------------	--------------	-------------	----------------	---------------

Pending Active Completed Rejected All

Expansion Fund for Handicraft Export Business
A handicraft export business with confirmed orders from two European buyers needs funds for a second workshop.
Sabila Noor · sabila@demo.com · 9/12/2026 · BDT 450,000

[View](#) [Reject](#) [Approve](#)

SAY THIS

This is content moderation. No listing becomes public until the admin approves it here, and a rejection always carries a reason so the user knows what to fix.

Manage users

/dashboard/users

- Every registered account with role, status and NID state.
- Activate, reject, suspend, block or delete an account.
- Search and filter by role or status.
- Opening a user shows their profile and their NID image.

The screenshot shows the 'Manage Users' interface in the InvestorHub Admin panel. The left sidebar contains a menu with options: Overview, Post Approvals, Manage Users (highlighted), Reports, Payments, Contact Inbox, and Analytics. The main content area is titled 'ADMIN Users' with a subtitle 'Search, filter, and manage platform accounts.' It features a search bar 'Search by name or email' and two filter dropdowns: 'All roles' and 'All status'. Below these is a table with columns: USER, ROLE, STATUS, NID, JOINED, and ACTIONS. The table lists five users: System Admin (Admin, Active), Nusrat Jahan (Investor, Active), Imran Kabir (Business, Active), Sabila Noor (Business, Active), and Rafiq Hasan (Investor, Active). Each user row has an 'Active' status dropdown and a delete icon. The bottom of the sidebar shows the current user 'System Admin' with a 'Sign out' button.

USER	ROLE	STATUS	NID	JOINED	ACTIONS
S System Admin admin@demo.com	Admin	Active	—	9/12/2026	Active
N Nusrat Jahan nusrat@demo.com	Investor	Active	Missing	9/12/2026	Active
I Imran Kabir imran@demo.com	Business	Active	Missing	9/12/2026	Active
S Sabila Noor sabila@demo.com	Business	Active	Missing	9/12/2026	Active
R Rafiq Hasan rafiq@demo.com	Investor	Active	Missing	9/12/2026	Active

SAY THIS

This is where the admin activates a new member after checking the NID, and where a bad actor can be suspended or blocked.

Reports

/dashboard/reports

- Complaints submitted by members about a listing or a user.
- Shows the reason and the reported target.
- The admin sets the status and writes a note.
- The reporter sees that decision on their own page.

SAY THIS

Members can report bad content, and the admin handles those complaints here. The decision is sent back to the person who reported it.

Payments

/dashboard/payments

- Every investment and every entry fee.
- Investment volume, commission earned and total revenue.
- Transaction id, payment method and status of each payment.
- Filter by state: completed, pending, failed or cancelled.

ADMIN

System Admin Admin Sign out

SAY THIS

This is the financial view of the platform. The admin can see every transaction, how much was invested and how much commission the platform earned.

Contact inbox

/dashboard/contacts

- Messages sent from the public contact page.
- Unread messages are highlighted.
- The admin can mark a message read or delete it.
- Keeps support requests in one place.

SAY THIS

Every message from the public contact form arrives in this inbox, so no support request is lost in an email account.

Analytics

/dashboard/analytics

- Total users, listings, payment volume and platform revenue.
- Health rates: activation, listing approval, match acceptance, payment success.
- Breakdown by role, by status, by listing state and by match state.
- All values are calculated live with MongoDB aggregation.

SAY THIS

Finally the analytics page. These numbers are not fixed text — they are calculated live from the database using aggregation, so the admin always sees the real state of the platform.

PART 6

Behind the scenes

How the system protects the user, the money and the data

How the platform stays safe

Accounts

- Passwords are hashed with bcrypt and never returned by the API.
- A signed JWT token is required for every protected route.
- The role and the account status are checked on the server, not in the browser.

Content and abuse

- Every listing is approved by a human before it is public.
- All input is validated on the server with express-validator.
- Rate limiting stops one client from flooding the API.

Privacy

- The NID image is visible only to the owner and the admin.
- Contact details are hidden until a match is accepted.
- Card details never touch my server — the gateway handles them.

SAY THIS

Security was designed into the project, not added at the end. The three areas are the account, the content and the privacy of personal data.

How the money moves — and why it is safe

- 1 Investor clicks Invest**
Enters the amount on the listing page
- 2 Server creates a session**
A unique transaction id is generated and stored
- 3 Gateway page opens**
The investor pays with card, bKash, Nagad or bank
- 4 Gateway calls back**
Success, fail or cancel is returned to my server
- 5 Server re-validates**
The payment is checked again with the gateway API — a callback alone is never trusted
- 6 Settlement**
Commission deducted, match finalized, listing marked funded, invoice generated

SAY THIS

This is the most important technical part. I never trust the browser redirect. The server asks the gateway again whether the payment is genuine, and the same payment can never be counted twice.

How live chat works

Connection

- The browser opens a Socket.IO connection.
- The identity is taken from the JWT token at handshake time.
- A stale socket from a previous login is rejected.

Conversation

- Both users join a room for their conversation.
- A new message is pushed to everyone in that room.
- Typing and seen events use the same channel.

Storage

- Every message is stored in MongoDB.
- The conversation list shows the last message.
- History is loaded when the conversation is opened.

SAY THIS

The chat is not refreshing the page again and again. It keeps one open connection, so a message appears on the other screen immediately, and it is also saved in the database.

The database — 12 collections

People

- users — identity, role, status
- investorprofiles — investment preferences
- businessmanprofiles — company details

Activity

- posts — listings
- matches — the pair and its state
- conversations and messages — the chat

Money

- investments — amount, commission, net
- feepayments — the entry fee
- reviews — one per account

Support

- reports — complaints from members
- contactmessages — public enquiries
- Indexes on the fields used for search

SAY THIS

All data lives in twelve MongoDB collections. Every collection has a schema that fixes the field types and the allowed values, so the data stays disciplined.

What is complete, what is next

Completed

- All three roles with full dashboards.
- Verified onboarding with entry fee and NID.
- Listing publication with admin moderation.
- Matching, real-time chat and reporting.
- Gateway payment with commission and PDF invoice.
- Admin analytics and the AI assistant.

Known limitations

- Identity is verified manually by the admin.
- The platform holds no escrow account.
- Matching is by search, not by recommendation.
- The interface is English only.

Future plan

- Escrow to release funds on a milestone.
- A recommendation engine for matching.
- Automatic NID verification.
- Bangla interface and mobile app.
- Email and push notifications.

SAY THIS

The core platform is complete and working end to end. I am honest about the limitations, and each of them has a clear plan in the next version.

Thank you

Any questions?

Demo

The live platform can be opened during the defense
